A Survey of Metaphysics provides a systematic overview of modern metaphysics, covering all of the most important topics likely to be encountered on a metaphysics course. The conception of metaphysics underlying the book is the fairly traditional and widely-shared one that metaphysics deals with the deepest questions that can be raised concerning the fundamental structure of reality as a whole. The book is divided into six main parts, each relatively self-contained, focusing in turn on the following major themes: identity and change, necessity and essence, causation, agency and events, space and time, and universals and particulars. In an introductory chapter, the conception of metaphysics underlying the book is explained and defended against the many and varied opponents of metaphysics those students are likely to encounter. While the book makes reference when necessary to the history of metaphysics, its emphasis is on contemporary views and issues. The author's approach is not narrowly

Real Time II extends and evolves DH Mellor's classic exploration of the philosophy of time, Real Time. This new book answers such basic metaphysical questions about time as: how do past, present and future differ, how are time and space related, what is change, is time travel possible? Originally published in 1987. This book comprises a critical exposition of the thoughts on metaphysics of the major philosophers of the tradition. It introduces the ideas of these philosophers to students but is of interest to teachers as well. The author begins with a survey of the metaphysical writings of Plato, Aristotle, Berkeley, Leibniz and Bradley, clarifying throughout the relation of their methods and results to those of science. He follows this with a careful study of the critical attitudes to metaphysics espoused by Kant, Wittgenstein and the Logical Positivists. In the final section he scrutinizes the attempts by Collingwood, Wisdom and Lazerowitz to rehabilitate metaphysics.

the past 20 years, *More Kinds of Being: A Further Study of Individuation, Identity, and the Logic of Sortal Terms* presents a thorough reworking and expansion of the 1989 edition of *Kinds of Being*. Brings many of the original ideas and arguments put forth in *Kinds of Being* thoroughly up to date in light of new developments. Features a thorough reworking and expansion of the earlier work, rather than just a new edition. Reflects the author's conversion to what he calls 'the four-category ontology,' a metaphysical system that takes its inspiration from Aristotle. Provides a unified discussion of individuation and identity that should prove to be essential reading for philosophers working in metaphysics.

Metaphysics: The Basics is a concise and engaging introduction to the philosophical study of the world and universe in which we live. Concerned with questions about reality, existence, time, identity and change, metaphysics has long fascinated people but to the uninitiated some of the issues and problems can appear very complex. In this lively and lucid book, Michael Rea examines and explains key questions in the study of metaphysics such as:

- Can two things be in the same place at the same time?
- Do creatures of fiction exist?
- Are human beings free?
- Is time travel possible?
- Is there just one world or many worlds?

With a glossary of key terms and suggestions for further reading, the book considers key philosophical arguments around *Metaphysics*, making this an ideal starting point for anyone seeking a full introduction to the debates both within and about metaphysics.
