~~Power Transmitter (Rev. A)~~

Take the two ends of you coil and put it into the function generator on the top two screw terminals, one in each terminal.

Polarity is not a problem right now because the signal will be AC. Now place your 0.02 μ F film capacitor in parallel with the terminals you put the wire magnet ends into.

(WET), or
electromagnetic power
transfer is the
transmission of electrical
energy without wires as a
physical link. In a
wireless power
transmission system, a
transmitter device, driven
by electric power from a
power source, generates a
time-varying
electromagnetic field,
which transmits power
