istence that counseling psychology needs the respectability and productivity of a theoretical framework and then, at most, made a scattered and timid attempt, Pepinsky and Pepinsky have courageously assembled in a few theoretical principles a much broader context of client-counselor or behavior. In this book, we contend that the psychologist who engages in counseling can be both practitioner and scientist-that he can contribute to knowledge while helping clients. Admittedly, few counselors are theorists in the strict sense of the term, but inevitably every counselor will bring to his work with clients certain assumptions. He will have some

underlying rationale (vague and implicit though it may be) for what he does, some hunches about what different clients will do in different situations, and some general ideas about the counseling procedures that are apt to be effective. If he is to make claims for the efficacy of his practice, he must be willing to subject these ideas to empirical test. Only then can he begin to find out whether what he has done works and how it works. Only as the counselor makes communicable what he does can his knowledge be imparted to others. This book begins with our argument for reconciling the dual roles of practicing counselor and researcher and proceeds to a short "guided tour" of current empirical and theoretical approaches to counseling. We do not insist upon the adoption of any particular approach to counseling. But we do urge the practicing counselor to make explicit his own assumptions and to use them in making verifiable predictions about the observable behavior of clients and counselor. Social Theory and Social Practice is a unique effort at applied social theory. Hans L. Zetterberg believes that social research has now advanced so far that social scientists can give advice without being restricted to new research projects. They can use previously proven theories as the basis for sound practical recommendations. This approach has profound implications in the application of social science to problems in business management, labor strife, government decision-making, in such areas as education, health and human welfare. It remains a pioneering discourse for practitioners of social research and social policy. Zetterberg gives a searching review of the various ways in which social practitioners attempt to use the accumulated knowledge of social science. He proceeds with a compact summary of the knowledge of the academicians of social science, noting that practitioners are often unaware of much useful academic knowledge. The process by which this knowledge is transformed into practical advice is spelled out in detail, and is illustrated with examples from an actual consultation about problems faced by an art museum that wanted to increase its audience. Chapter 1 identifies the problem; chapter 2, "The Knowledge of Social Practitioners," outlines practitioners' reliance on scientific knowledge; chapter 3, "The Knowledge of Social Theorists," discusses sociological terms and sociological law; chapter 4, "The Practical Use of Social Theory through Scholarly Consultants," explores the actual specificity of social theory and its uses, while the concluding chapter examines the uses of consultants, covering some prerequisites for the successful use of applied science. The book rejects the widespread view that in order to put social science to use, we have to popularize its content. Zetterberg's approach is rather to translate a client's problem into a powerful theoretical statement, the solution to which is calculated and then presented to the client as down-to-earth advice. This volume will be of immediate interest to scholars in the field of social theory; to consultants and practitioners who give advice on social problems and policy decisions; and to executives who use advice from social scientists.
