## Chromosome Study Lab 26 Answers

Chromosome analysis or karyotyping is a test that evaluates the number and structure of a person's chromosomes in order to detect abnormalities. Chromosomes are thread-like structures within each cell nucleus and contain the body's genetic blueprint. Each chromosome contains thousands of genes in specific locations.

We study the mechanisms of chromosome segregation in mammalian eggs. We are a young lab based in the beautiful city of Bristol. We are interested in the mechanisms that safeguard chromosome segregation during meiosis in mammals, including humans. We use techniques ranging from advanced live cell microscopy to biochemical reconstitution of cytoskeletal interactions in cell-free systems in order to understand a process that is crucial to the start of every human life, meiosis.
