Make sure the McCulloch chain saw has fresh fuel, at least half a tank. Test the chain brake, in front of the saw's top handle, to be sure it is not engaged to lock the chain. Test the chain to see that it moves freely, is not binding in the bar and is properly adjusted for tension; a bar that is binding or is too loose or too tight will interfere with saw operation.

In newer chainsaw models, such as
the MC4218AV, McCulloch
recommends mixing high quality
synthetic two-cycle oil at a 40:1 ratio.
In either case, use two-cycle oil made
for air-cooled engines. Do not use two-
cycle oil made for marine motors. You
could damage your chain saw's
engine.
