Micronutrient levels in Georgia's soils are usually adequate for wheat production unless soils have been over-limed. The two micronutrients most likely to be deficient, and the ones routinely tested for with soil testing, are zinc (Zn) and manganese (Mn). Adequate baseline levels of soil test Zn and Mn should be maintained.

amounts, and timing can have a huge impact on wheat yield and quality. To properly manage fertility in wheat we need to have recent soil samples, anticipated yield goal, and crop history for the field. Typical yields in our area of 40 - 70 bushels of wheat per acre will require between 80 and 100 pounds of nitrogen (N) per acre.
